

Claw release button on knee level

Task Description: **Milking cows**

To attach the claws to the teat, the farmer has to push on the display above eye level to release the cord with the claws. This means 100 times pushing for 100 cows.

Comments of the employee:

- ❑ *'Continuously repetition of the same gestures'*
- ❑ *'Work height not in accordance with work posture: above eye level'*

Comments of the employer: motivation regarding solution:

- ❑ For smaller people a button at knee level is a good solution because after 50 times overhead, this movement becomes burdening.

MSD risks:

- ❑ Posture: reaching above eye level
- ❑ Repetition: as much as the number of cows

Exposed areas:

- ❑ Neck/shoulder

Solutions:

- ❑ Push button at knee level. When pushing the button the cord with the claws releases. Excessive reaching above eye level is avoided.
