

Spray bottle with disinfectant

Task Description: **Dipping teats**

After milking almost all farmers dip the teats with disinfectant in a foaming dip cup.

Comments of the employee:

- ❑ *'Continuously repetition of the same gestures'*
- ❑ *'Work height not in accordance with work posture'*

MSD risks:

- ❑ Posture: dependent of the position of the udder
- ❑ Frequency: 400 times for 100 cows

Exposed areas:

- ❑ Neck/shoulder
- ❑ Arm/wrist
- ❑ Lower back

Solutions:

- ❑ Instead of dipping the farmer can spray the teats with the disinfectant in a spray bottle. This diminishes the reach distance and is more hygienic. Eventual infections will not be transferred to the next cow.
